

AMENDMENTS TO THE SPECIFICATION:

Please amend paragraph [051] as follows:

B1 [051] Figure 5 illustrates an event table in accordance with methods and apparatus consistent with the principles of the present invention. Event table 350 illustrates the type of information that may be stored in service center 106. Each line of event table 350, such as element 360, represents an event record within an event table. For example, event record 360 may correspond with screen 300 to represent a call to telephone number "(870) 555-1234" at 8:00 AM. In addition, event record 370 shows that a conference call is scheduled at phone number (888) 555-1234 with a pass number 12345 at 12:00 PM. Management server 406 may provide event record 360 to dialing server 412 to initiate a phone call between user 110 and, for example, called party ~~120~~ 110.

B2 [65] If user provides an affirmative indication, then service center 106 may initiate and establish a call on behalf of a user 110 (step 712). After receiving an affirmative indication, management server 406 may provide information from event table 350 to dialing server 412. Management server 406 may also provide one or more phone numbers for user 110, such as phone numbers for phones 114, 116, and 118. Dialing server may then initiate a call based on the event record, such as event records 360 and 370.
